

Since its beginning, Hamlin Casting has produced over 60 million pounds of aluminum sand castings for corporations in industries from lighting and electrical to trucking and marine. In fact, we have produced more Almag castings than any other foundry in the US or Canada. Our castings range in size from minuscule to 75 pounds.

We offer:

- In-house machine shop to save you time and money
- Heat treating and anodizing
- Inventory control and stocking program for just in time deliveries
- Fast turnaround on all orders - 4–6 weeks for all orders, no matter how large or small
- Reliability – You get what you expect: good work, on time, courteous service and reasonable prices

We are proud of our facility and the quality of our workmanship. Our highly qualified personnel produce exceptional results starting with pattern design and ending with final inspection and shipping. Since our beginning in 1946, we have been a leader in innovation and technology.

Founded in 1946 just outside St. Louis, Missouri, We moved to our current location in Pilot Mountain, North Carolina, in 1985. Housed in a modern 61,000 square foot manufacturing and office facility, our process is fully automated and equipped with state of the art machinery. Located close to major air and freight distribution channels, we are positioned for prompt service.
